

**Hainesport Township School District  
211 Broad Street Hainesport, NJ 08036**

**Course Title: Pre-Algebra Math Grade 7  
Board of Education Adoption Date: January, 2017  
Board of Education Re-adoption Date: 8/28/2018, 1/2/2024**

## **District Administration**

Joseph R. Corn, Superintendent  
Ramon W. Santiago, Principal 5-8 & Curriculum and Instruction  
Julia B. Wolfrom, Principal PreK-4 & Special Services  
Alexander F. Fisher, Assistant Principal  
Christopher C. DeSanto, Assistant Principal

## **Members of the Hainesport Township Board of Education**

Larry Brandolph  
Jason Cardonick  
Melissa Carlton  
Bianca Cuniglio  
Jeffrey Duda  
Kristin Jakubowski  
Erin Minero  
Jillian Ormsby  
Jennifer Weres

**Course Description and Concepts**

**PRE-ALGEBRA** – This course is offered to 7th grade students who have shown the ability to reason and analyze concepts at high-level of thinking such as synthesizing information. Some concepts taught are: integers, decimals, fractions, solving equations and inequalities, percents, coordinate system, functions and equations, probability, and geometry. Group and hands-on activities are incorporated throughout the year as the teacher facilitates the lessons rather than direct teaching. Pre-Algebra closely follows the Mathematics 8 curriculum. Consequently, those students that participate in Pre-Algebra and subsequently do not meet the prerequisites for Algebra will repeat much of the math curriculum in 8th grade to ensure mastery of these skills.

**Pre-Algebra Placement Criteria**

To be considered for Pre-Algebra, students must earn at least 5 out of 8 possible points based upon the following criteria:

CRITERIA		SCORE RANGE	POINTS EARNED
*Points earned for this criteria based on previous year's placement.	<b>MATH 6 FINAL GRADE AVERAGE</b>	96-100%	1 point
		Less than 96%	0 points
	<b>ADVANCED MATH 6 FINAL GRADE AVERAGE</b>	96%-100%	2 points
		90%-95%	1 point
		Less than 90%	0 points
<b>MATHEMATICS PARCC SCORE</b>		Level 5	2 points
		Level 4	1 point
		Levels 1 - 3	0 points
<b>MATHEMATICS READINESS ASSESSMENT</b>		90-100%	2 points
		80-89%	1 point
		Less than 80%	0 points
		85-100%	2 points

<b>MATHEMATICS BENCHMARK ASSESSMENT SCORE AVERAGE</b>	70-84%	1 point
	Less than 70%	0 points

**New Jersey Student Learning Standards Math**

**[New Jersey Student Learning Standards for Mathematics](#)**

**NJ Technology Standards**

**8.1 Educational Technology:** All students will use digital tools to access, manage, evaluate, and synthesize information in order to solve problems individually and collaborate and create and communicate knowledge.

**8.2 Technology Education, Engineering, Design and Computational Thinking - Programming:** All students will develop an understanding of the nature and impact of technology, engineering, technological design, computational thinking and the designed world as they relate to the individual, global society, and the environment.

**Career Ready Practices**

Career Ready Practices describe the career-ready skills that all educators in all content areas should seek to develop in their students. They are practices that have been linked to increase college, career, and life success. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP3. Attend to personal health and financial well-being.
- CRP4. Communicate clearly and effectively and with reason.
- CRP5. Consider the environmental, social and economic impacts of decisions.
- CRP6. Demonstrate creativity and innovation.
- CRP7. Employ valid and reliable research strategies.

CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.

CRP9. Model integrity, ethical leadership and effective management.

CRP10. Plan education and career paths aligned to personal goals.

CRP11. Use technology to enhance productivity.

CRP12. Work productively in teams while using cultural global competence.

**Pacing Guide**

Unit Topic	Unit #	APX Unit Length
Numbers & Operations	I	5 weeks (23 days)
Ratios & Proportions Percents	II	4 weeks (18 days)
Expressions Equations & Inequalities	III	6 Weeks (25.5 days)
Geometry	IV	8 weeks (41 days)

Statistics & Probability	V	2 weeks (10 days)
Graphing Linear Equations	VI	8 weeks (38 days)

<b>Pre-Algebra Math 7 Curriculum Unit 1 (2 Parts)</b>	
<b>Title:</b> Numbers & Operations	
<b>Subject:</b> Pre-Algebra Math 7	<b>Length of Time:</b> 5 weeks (23 days)
<p><b>Unit 1 Summary:</b> Unit 1 Part 1 will allow students to further their understanding of the number system. They will explore rational numbers and perform numerous operations using them. They will add, subtract, multiply, and divide rational numbers when solving equations. They will also extend their knowledge of rational numbers to decimals and real world applications. Unit 1 Part 2 will then allow students to evaluate squares and radicals. They will explore how to simplify and approximate square roots to help solve expressions. The chapter will also introduce different properties of exponents and solving equations using them. These skills will be necessary when solving problems involving Pythagorean Theorem or exponential notations.</p>	

## Learning Targets

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

Standard #s:	Standards:
7.NS.1	Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. d. Apply properties of operations as strategies to add and subtract rational numbers.(Part 2)
7.NS.2	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. c. Apply properties of operations as strategies to multiply and divide rational numbers (Part 2)
7.NS.3	Solve real-world and mathematical problems involving the four operations with rational numbers. Computations with rational numbers extend the rules for manipulating fractions to complex fractions.
8.NS.2	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., $\pi^2$ ).
8.EE.1	Know and apply the properties of integer exponents to generate equivalent numerical expressions. For example, $3^2 \times 3^{-5} = 3^{-3} = 1/3^3 = 1/27$ .
Technology 8.1.8.D.1	Understand and model appropriate online behaviors related to cyber safety, cyber bullying, cyber security, and cyber ethics including appropriate use of social media.
Technology 8.1.8.D.4	Assess the credibility and accuracy of digital content
Technology 8.2.8.C.1	Explain how different teams/groups can contribute to the overall design of a product.
Technology 8.2.8.C.2	Explain the need for optimization in a design process.
Standard#:	Standard:

MP1	Making sense of problems and persevere in solving them.
MP2	Reason abstractly and quantitatively.
MP3	Construct viable arguments and critique the reasoning of others.
MP4	Model with mathematics.
MP5	Use appropriate tools strategically.
MP6	Attend to precision.
MP7	Look for and make use of structure.
MP8	Look for and express regularity in repeated reasoning.
<b>Modifications</b>	
Standards-based grading, reassessments, differentiate assignments, scaffold instruction, study guides, peer/teacher tutoring assistance, tiered assignments, student choice, modify pace, lesson tutorial videos, performance assessments, modified rubrics, assessment modified for IDEA, add enrichment activities, add extension activities to projects, challenge activities	
<b>Interdisciplinary Connections</b>	
Science, Language Arts, and Technology	
<b>Integration of 21st Century Themes and Skills</b>	
<b>21<sup>st</sup> Century Skills</b> · Financial, Economic, Business, and Entrepreneurial Literacy <b>21<sup>st</sup> Century Themes</b> · Critical Thinking and Problem Solving · Communication and Collaboration	

**Pre-Algebra Math 7 Curriculum  
Unit 1 Part 1**

**Title:** Numbers & Operations

**Subject:** Pre-Algebra Math 7

**Length of Time:** 3 weeks (14 days)

**Unit 1 Part 1 Summary:** Unit 1 Part 1 will allow students to further their understanding of the number system. They will explore rational numbers and perform numerous operations using them. They will add, subtract, multiply, and divide rational numbers when solving equations. They will also extend their knowledge of rational numbers to decimals and real world applications.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

**Domain:** The Number System

**Cluster:** Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers

Standard #s:	Standards:
7.NS.1	Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
7.NS.2	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.
7.NS.3	Solve real-world and mathematical problems involving the four operations with rational numbers. Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

**Unit 1 Part 1 Essential Question:**

- How do operations affect rational numbers?
- How can we use rational numbers to solve real world application problems?

**Unit 1 Part 1 Enduring Understandings:**

- Previous understanding of operations of numbers can be directly applied to rational numbers.
- Rational numbers can be used to solve real word problems.

<b>Unit 1 Part 1 Objectives:</b>	
<ul style="list-style-type: none"> <li>· Students will be applying their prior knowledge of the number system to problems involving rational numbers.</li> <li>· Students will be able to add, subtract, multiply and divide rational numbers.</li> <li>· Students will transform rational numbers into decimals.</li> <li>· Students will solve real world problems using rational numbers.</li> </ul>	
<b>Evidence of Learning</b>	
<b>Formative Assessments:</b>	
<ul style="list-style-type: none"> <li>· Questioning strategies used throughout the unit.</li> <li>· 5 Quizzes</li> </ul>	
<b>Summative Assessment:</b>	
<ul style="list-style-type: none"> <li>· Cumulative Assessment</li> </ul>	
<b>Pacing Guide</b>	
<b>Topics</b>	<b>Timeframe</b>
Topic #1: Addition, Natural Numbers & Whole Numbers	0.5 day
Topic #2: Addition, Subtraction and Integers ( <a href="#">Absolute Value 1.4 in HM textbook</a> ) Lab: RAFT – The Absolutely Valuable Game <b>Quiz #1</b>	1.5 days
Topic #3: Addition and Subtraction of Integers ( <a href="#">1.5 and 1.6 in HM textbook</a> ) <b>Quiz #2</b>	2 days
Topic #4: Multiplication and Division of Integers ( <a href="#">1.7 in HM textbook</a> ) <b>Quiz #3</b>	2 days
Topic #5: Operations with Rational Numbers	0.5 day
Topic #6: Addition and Subtraction of Rational Numbers ( <a href="#">5.2 and 5.3 in HM textbook</a> ) Lab: RAFT – Fraction Action Game	1.5 days
Topic #7: Adding and Subtracting Rational Numbers Review Lab: RAFT – Above and Below Zero Game Lab: RAFT – Graphing Race to the Edge	1 days

<b>Quiz #4</b>	
Topic #8: Multiplication and Division of Rational Numbers ( <a href="#">5.4 and 5.5 in HM textbook</a> )	2 days
<b>Quiz #5</b>	
Topic #9: Converting Rational Numbers to Decimals ( <a href="#">5.1 in HM textbook</a> )	1 days
Review and Cumulative Assessment	2 days

**Pre-Algebra Math 7 Curriculum  
Unit 2 (2 Parts)**

**Title:** Ratios, Proportional Relationships, and Percents

**Subject:** Pre-Algebra Math 7

**Length of Time:** 4 weeks (18 days)

**Unit 2 Summary:** Unit 2 Part 1 will give students the opportunity to analyze proportional relationships to solve ratios, proportions, and real-world math problems.  
Unit 2 Part 2 will introduce students to percents. They will learn the different types of percent problems and how to represent the percent equations algebraically. They will also learn how to solve real world application problems involving percents.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

Standard#:	Standard:
7.RP.1	Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units.
7.RP.2	Recognize and represent proportional relationships between quantities. a. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin. b. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships.

	<p>c. Represent proportional relationships by equations. <i>For example, if total cost <math>t</math> is proportional to the number <math>n</math> of items purchased at a constant price <math>p</math>, the relationship between the total cost and the number of items can be expressed as <math>t = pn</math>.</i></p> <p>d. Explain what a point <math>(x, y)</math> on the graph of a proportional relationship means in terms of the situation, with special attention to the points <math>(0, 0)</math> and <math>(1, r)</math> where <math>r</math> is the unit rate.</p>
7.RP.3	Use proportional relationships to solve multistep ratio and percent problems. Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.
7.EE.2	Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related.
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.
7.G.1	Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.
Technology 8.2.8.C.4	Identify the steps in the design process that would be used to solve a designated problem.
Technology 8.2.8.C.5a	Create a technical sketch of a product with materials and measurements labeled.
<b>Domain: Standards for Math Practice</b>	
<b>Standard#:</b>	<b>Standard:</b>
MP1	Making sense of problems and persevere in solving them.
MP2	Reason abstractly and quantitatively.

Lesson #7: Real-life Application Problems/ Quiz #3 (7.6 and 7.7 in 7th HM textbook)	1 day
Review and Cumulative Assessment	1 day
<b>Curriculum Resources:</b>	
<ul style="list-style-type: none"> <li>· Textbook and online resources</li> <li>· <a href="https://njctl.org/courses/math/7th-grade/">https://njctl.org/courses/math/7th-grade/</a></li> </ul>	

**Pre-Algebra Math 7 Curriculum**

**Unit 3 (3 Parts)**

**Title:** Expressions, Equations, Inequalities, and Scientific Notation

**Subject:** Pre-Algebra Math 7

**Length of Time:** 6 Weeks (25.5 days)

**Unit 3 Summary:** Unit 3 Part 1 will introduce students to different properties of expressions. They will be able to combine like terms, write expressions when given a verbal phrase, and evaluate both numeric and algebraic expressions. Unit 3 Part 2 will introduce students to different properties equations can have. They will be able to combine like terms, solve multi-step equations, and deal with inequalities. Also, they will identify the associative, commutative, and distributive properties. Unit 3 Part 2 also explores linear equations. Students learn to solve equations starting with a review of inverse operations and two-step equations and progressing to more complex equations. Unit 3 Part 2 concludes with using the skills to solve word problems. Unit 3 Part 3 will introduce the concept of scientific notation to students. It will demonstrate the purpose of scientific notation and how to write numbers using this form. They will be able to convert numbers between scientific notation and standard form, as well as perform different operations within equations.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

<b>Standard #s:</b>	<b>Standards:</b>
7.NS.1	Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. d. Apply properties of operations as strategies to add and subtract rational numbers.(Part 2)
7.NS.2	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. c. Apply properties of operations as strategies to multiply and divide rational numbers (Part 2)
7.NS.3	Solve real-world and mathematical problems involving the four operations with rational numbers. Computations with rational numbers extend the rules for manipulating fractions to complex fractions.
7.EE.1	Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.
7.EE.2	Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. <i>For example, <math>a + 0.05a = 1.05a</math> means that "increase by 5%" is the same as "multiply by 1.05."</i>
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between

	forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional $\frac{1}{10}$ of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar $9\frac{3}{4}$ inches long in the center of a door that is $27\frac{1}{2}$ inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.
8.EE.7	<p>7. Solve linear equations in one variable.</p> <p>a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form <math>x = a</math>, <math>a = a</math>, or <math>a = b</math> results (where <math>a</math> and <math>b</math> are different numbers).</p> <p>b. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.</p>
<b>Standards for Math Practice</b>	
<b>Standard#:</b>	<b>Standard:</b>
MP1	Making sense of problems and persevere in solving them.
MP2	Reason abstractly and quantitatively.
MP3	Construct viable arguments and critique the reasoning of others.
MP4	Model with mathematics.
MP5	Use appropriate tools strategically.
MP6	Attend to precision.
MP7	Look for and make use of structure.
MP8	Look for and express regularity in repeated reasoning.
<b>Modifications</b>

<b>Unit 3 Part 1 Essential Questions:</b> <ul style="list-style-type: none"> <li>· What is a numeric expression &amp; how is it evaluated?</li> <li>· What is an algebraic expression &amp; how is it simplified?</li> <li>· How is an algebraic expression evaluated?</li> </ul>	<b>Unit 3 Part 1 Enduring Understandings:</b> <ul style="list-style-type: none"> <li>· A numeric expression is an expression of numbers and operations. When evaluating them, there is a specific order, called the order of operations.</li> <li>· An algebraic expression is an expression that contains both numbers and variables that is simplified using the distributive property and combining like terms.</li> <li>· An algebraic expression is evaluated using substitution followed by the order of operations.</li> </ul>
<b>Unit 3 Part 1 Objectives:</b>	

- Students will identify constants, coefficients, and variables in an algebraic expression.
- Students will evaluate a numerical expression using the correct order of operations.
- Students will use the distributive property to simplify algebraic expressions.
- Students will learn to simplify algebraic expressions by combine like terms.
- Students will translate verbal phrases into mathematical and algebraic expressions.
- Students will evaluate algebraic expressions when each variable is assigned a value using substitution and the order of operations.

**Pre-Algebra Math 7 Curriculum  
Unit 3 Part 2 Plan**

**Title:** Solving Equations & Inequalities

**Subject:** Pre-Algebra Math 7

**Length of Time:** 4 Weeks (16.5 days)

**Unit 3 Part 2 Summary:** Unit 3 Part 2 will introduce students to different properties equations can have. They will be able to combine like terms, solve multi-step equations, and deal with inequalities. Also, they will identify the associative, commutative, and distributive properties. Unit 3 Part 2 also explores linear equations. Students learn to solve equations starting with a review of inverse operations and two-step equations and progressing to more complex equations. Unit 3 Part 2 concludes with using the skills to solve word problems.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

**Domain:** Expressions and Equations

**Cluster:** Use properties of operations to generate equivalent expressions

**Standard #s**

**Standard:**

7.EE.1	Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.
7.EE.2	Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. <i>For example, <math>a + 0.05a = 1.05a</math> means that "increase by 5%" is the same as "multiply by 1.05."</i>
<b>Cluster: Solve real-life and mathematical problems using numerical and algebraic expressions and equations.</b>	
<b>Standard #s:</b>	<b>Standards:</b>
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional $\frac{1}{10}$ of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar $9\frac{3}{4}$ inches long in the center of a door that is $27\frac{1}{2}$ inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.
7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. a. Solve word problems leading to equations of the form $px + q = r$ and $p(x + q) = r$ , where $p$ , $q$ , and $r$ are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width? b. Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$ , where $p$ , $q$ , and $r$ are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem. For example: As a salesperson, you are paid \$50 per week plus \$3 per sale. This week you want your pay to be at least \$100. Write an inequality for the number of sales you need to make, and describe the solutions

8 Use numbers expressed in the form of a single digit times a whole-number power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other.

8 Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology.

<p><b>Unit 3 Part 3 Essential Question:</b></p> <ul style="list-style-type: none"> <li>· How will scientific notation help when writing numbers and equations?</li> <li>· How is scientific notation used in real world application problems?</li> <li>· How numbers are compared and manipulated using scientific notation?</li> </ul>	<p><b>Unit 3 Part 3 Enduring Understanding:</b></p> <ul style="list-style-type: none"> <li>· Scientific notation will help demonstrate very large and very small numbers when solving real world application problems.</li> <li>· Numbers can be represented in scientific notation and still be manipulated using operations such as addition, subtraction, multiplication, and division.</li> </ul>

<b>Pre-Algebra Math 7 Curriculum Unit 4 (5 Parts)</b>	
<b>Title:</b> 2D and 3D Geometry	
<b>Subject:</b> Pre-Algebra Math 7	<b>Length of Time:</b> 8 weeks (41 days)
<p><b>Unit 4 Summary:</b> Unit 4 Part 1 will have students determining if a triangle can be created using the given conditions. Students will also create some simple geometric constructions. In Unit 4 part 2, students will be able to use models to show their understanding of congruent and similar figures. Unit 4 Part 3 will allow students to solve for area and perimeter of different 2D geometrical shapes. They will calculate the area of rectangles, parallelograms, triangles, trapezoids, circles, irregular figures, and shaded figures. They will also explore special pairs of angles and the relationships they hold. Unit 4 Part 4 will introduce students to different properties of 3D figures. They will be able to compute the surface area of 3D figures, as well as their volume. This part will also provide problems of how 3D figures are found in everyday life. Unit 4 Part 5 will provide a deeper understanding of the Pythagorean Theorem and its converse for students. They will apply the theorem to problems involving right triangles that model real world problems. They will also find distances and midpoints between two points.</p>	
<b>Learning Targets</b>	
PARCC <span style="color: green;">■</span> Major Clusters; <span style="color: blue;">■</span> Supporting Clusters; <span style="color: orange;">●</span> Additional Clusters	
<b>Standard#:</b>	<b>Standard:</b>
8.G.1	Verify experimentally the properties of rotations, reflections, and translations:

	<ul style="list-style-type: none"> <li>a. Lines are taken to lines, and line segments to line segments of the same length.</li> <li>b. Angles are taken to angles of the same measure.</li> <li>c. Parallel lines are taken to parallel lines.</li> </ul>
8.G.2	Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.
8.G.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.
8.G.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.
8.G.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. <i>For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.</i>
8.G.6	Explain a proof of the Pythagorean Theorem and its converse.
8.G.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.
8.G.8	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.
7.G.2	Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.
7.G.4	Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
7.G.5	Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
7.G.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.

7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.
7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
7.G.3	Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.
8.G.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.
Technology 8.2.8.A.4	Redesign an existing product that impacts the environment to lessen its impact (s) on the environment.
Technology 8.2.8.A.5	Describe how resources such as material, energy, information, time, tools, people, and capital contribute to a technological product or system.
Technology 8.2.8.C.5.a	Create a technical sketch of a product with materials and measurements labeled.
Technology 8.2.8.C.8	Develop a proposal for a chosen solution that include models (physical, graphical, or mathematical) to communicate the solution to peers.
Technology 8.2.8.D.1	Design and create a product that addresses a real world problem using a design process under specific constraints.
MP3	Construct viable arguments and critique the reasoning of others.
MP4	Model with mathematics.
MP5	Use appropriate tools strategically
MP6	Attend to precision.
MP7	Look for and make use of structure.
MP8	Look for and express regularity in repeated reasoning.
<b>Modifications</b>	

Standards-based grading, reassessments, differentiate assignments, scaffold instruction, study guides, peer/teacher tutoring assistance, tiered assignments, student choice, modify pace, lesson tutorial videos, performance assessments, modified rubrics, assessment modified for IDEA, add enrichment activities, add extension activities to projects, challenge activities

**Pre-Algebra Math 7 Curriculum  
Unit 4 Part 2**

<b>Title:</b> 2D Geometry (from 8th)	
<b>Subject:</b> Pre-Algebra Math 7	<b>Length of Time:</b> 2 weeks (9 days)
<b>Unit 4 Part 2 Summary:</b> In Unit 4 part 2, students will be able to use models to show their understanding of congruent and similar figures.	
<b>Learning Targets</b>	
PARCC <span style="color: green;">■</span> Major Clusters; <span style="color: blue;">■</span> Supporting Clusters; <span style="color: yellow;">●</span> Additional Clusters	
<b>Domain:</b> Geometry	
<b>Cluster:</b> Understand congruence and similarity using physical models, transparencies, or geometry software.	
<b>Standard #s:</b>	<b>Standards:</b>
8.G.1	Verify experimentally the properties of rotations, reflections, and translations: <ul style="list-style-type: none"> <li>a. Lines are taken to lines, and line segments to line segments of the same length.</li> <li>b. Angles are taken to angles of the same measure.</li> <li>c. Parallel lines are taken to parallel lines.</li> </ul>
8.G.2	Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.
8.G.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.
8.G.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.
8.G.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. <i>For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.</i>

<p><b>Unit 4 Part 2 Essential Questions:</b></p> <ul style="list-style-type: none"> <li>• How can you use models of one and two-dimensional figures to show congruent figures?</li> <li>• How can you use models of one and two-dimensional figures to show similar figures?</li> </ul>	<p><b>Unit 4 Part 2 Chapter Enduring Understandings:</b></p> <ul style="list-style-type: none"> <li>• Congruent figures can be formed by a series of transformations.</li> <li>• Similar figures can be formed by a series of transformations.</li> <li>• Understand angle relationships in one and two-dimensional figures.</li> </ul>
<p><b>Unit 4 Part 2 Objectives:</b></p> <ul style="list-style-type: none"> <li>• Students will be able to transform figures on a coordinate plane.</li> <li>• Students will be able to use their understanding of angle relationships to find unknown angles.</li> <li>• Students will be able to describe a sequence of transformations that will result in congruent figures.</li> <li>• Students will be able to describe a sequence of transformations and dilations that will result in similar figures.</li> </ul>

**Pre-Algebra Math 7 Curriculum  
Unit 4 Part 3**

**Title:** 2D Geometry

**Subject:** Pre-Algebra Math 7

**Length of Time:** 2 weeks (10 days)

**Unit 4 Part 3:** Unit 4 Part 3 will allow students to solve for area and perimeter of different 2D geometrical shapes. They will calculate the area of rectangles, parallelograms, triangles, trapezoids, circles, irregular figures, and shaded figures. They will also explore special pairs of angles and the relationships they hold.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters	
<b>Domain: Geometry</b>	
<b>Cluster: Solve real-life and mathematical problems involving angle measure, area, surface area, and volume.</b>	
<b>Standard #s:</b>	<b>Standards:</b>
7.G.4	Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
7.G.5	Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
7.G.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.
<b>Domain: Expressions and Equations</b>	
<b>Cluster: Solve real-life and mathematical problems using numerical and algebraic expressions and equations.</b>	
<b>Standard # :</b>	<b>Standard:</b>
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.
7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
<b>Unit 4 Part 3 Essential Question:</b> What is difference between area and perimeter?	<b>Unit 4 Part 3 Enduring Understandings:</b> · Formulas can be determined and used to calculate the area of both regular and irregular shapes.
<b>Unit 4 Part 3:</b>	
<ul style="list-style-type: none"> <li>· Students will be able to determine is a triangle is possible.</li> <li>· Students will be able to draw triangles freehand, with ruler and protractor and with technology.</li> <li>· Students will calculate the perimeter of different 2D geometrical figures.</li> <li>· Students will calculate the circumference and area of different circles.</li> <li>· Students will be able to determine whether a triangle is possible or not.</li> <li>· Students will calculate the area of rectangles, parallelograms, triangles and trapezoids.</li> <li>· Students will use previous knowledge of area formulas to calculate the area of irregular and shaded figures.</li> </ul>

**Pre-Algebra Math 7  
Unit 4 Part 4**

<b>Title:</b> 3-D Geometry	
<b>Subject:</b> Pre-Algebra Math 7	<b>Length of Time:</b> 3 weeks (13 Days)
<b>Unit 4 Part 4:</b> Unit 4 Part 4 will introduce students to different properties of 3D figures. They will be able to compute the surface area of 3D figures, as well as their volume. This part will also provide problems of how 3D figures are found in everyday life.	
<b>Learning Targets</b>	
PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters	
<b>Domain: Geometry</b>	
<b>Cluster: Draw, construct, and describe geometrical figures and describe the relationships between them.</b>	
<b>Standard #:</b>	<b>Standard:</b>
7.G.3	Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.
<b>Cluster: Solve real-life and mathematical problems involving angle measure, area, surface area, and volume.</b>	
7.G.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.
8.G.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.
<b>Domain: Expressions and Equations</b>	
<b>Cluster: Solve real-life and mathematical problems using numerical and algebraic expressions and equations.</b>	
7.EE.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.
7.EE.4	Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.

<p><b>Unit 4 Part 4 Essential Questions:</b></p> <ul style="list-style-type: none"> <li>· How are 3D figures different from 2D figures?</li> <li>· What is a cross section of a figure and how will that help compute properties of the figure?</li> <li>· How are surface area and volume found for a 3D figure?</li> <li>· What is a 3-dimensional figure?</li> <li>· How can I find the volume of a 3-dimensional figure?</li> <li>· How can the volume of a 3-dimensional figure help me solve real world problems?</li> </ul>	<p><b>Unit 4 Part 4 Enduring Understandings:</b></p> <ul style="list-style-type: none"> <li>· 3D figures have unique characteristics and properties.</li> <li>· Perimeter and area of 2D figures are useful when finding volume and surface area of 3D figures.</li> <li>· There are different formulas that can be used when solving for the volume of a 3-dimensional figure.</li> </ul>
<p><b>Unit 4 Part 4 Objectives:</b></p> <ul style="list-style-type: none"> <li>· Students will be introduced to 3D solids and cross sections of 3D figures.</li> <li>· Students will learn how to compute the volume of different 3D figures.</li> <li>· Students will compute surface area of different 3D figures.</li> <li>· Students will identify what a 3-dimensional figure is.</li> </ul>	
<p><b>Evidence of Learning</b></p>

### Pre-Algebra Math 7 Curriculum

#### Unit 5 (1 Part)

**Title:** Statistics & Probability

**Subject:** Pre-Algebra Math 7

**Length of Time:** 2 weeks (10 days)

**Unit 5 Summary:** This unit will introduce students to the concept of solving problems that involve different types of events. They will examine sampling, compare two populations, and distinguish properties of events. Permutations, combinations, and probability will be learned to help solve problems. The fundamental counting principle will also be utilized throughout the chapter. Students will also work with statistical measures.

#### Learning Targets

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

<b>Domain: Statistics and Probability</b>	
<b>Cluster: Use random sampling to draw inferences about a population.</b>	
<b>Standard #s:</b>	<b>Standards:</b>
7.SP.1	Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences
7.SP.2	Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data. Gauge how far off the estimate or prediction might be.
<b>Cluster: Draw informal comparative inferences about two populations.</b>	
<b>Standard #s :</b>	<b>Standards:</b>
7.SP.3	Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability (mean absolute deviation) on either team; on a dot plot, the separation between the two distributions of heights is noticeable.
7.SP.4	Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations. For example, decide whether the words in a chapter of a seventh-grade science book are generally longer than the words in a chapter of a fourth-grade science book
<b>Cluster: Investigate chance processes and develop, use, and evaluate probability models.</b>	
<b>Standard #s:</b>	<b>Standards:</b>
7.SP.5	Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.

7.SP.6	Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times.
7.SP.7	<p>Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.</p> <p>a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.</p> <p>b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?</p>
7.SP.8	<p>Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation.</p> <p>a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.</p> <p>b. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event.</p> <p>c. Design and use a simulation to generate frequencies for compound events. For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?</p>
Technology 8.1.8.A.4	Graph and calculate data within a spreadsheet and present a summary of the results
Technology 8.1.8.A.5	Create a database query, sort and create a report and describe the process, and explain the report results
Technology 8.1.8.F.1	Explore a local issue, by using digital tools to collect and analyze data to identify a solution and make an informed decision

**Unit 5 Objectives:**

- Students will be introduced to the concept of sampling.
- Students will be able to draw inferences about a population based off a sample.
- Students will be able to compare two populations and solve real world application problems with them.
- Students will be able to measure the difference between the centers by expressing it as a multiple of a measure of variability.
- Students will understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring.
- Students will be able to use experimental and theoretical probability to determine the likelihood of an event occurring.
- Students will use the fundamental counting principle to solve problems.
- Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation.

**Evidence of Learning****Formative Assessments:**

- Questioning strategies used throughout the unit.
- 7 Quizzes

**Summative Assessment:**

- Cumulative Assessment

**Pacing Guide**

<b>Topics</b>	<b>Timeframe</b>
Topic #1: Introduction to Probability (6.7 in HM textbook)	1 day

- Life and Career Skills

**Pre-Algebra Math 7 Curriculum**

**Unit 6 (4 Parts)**

**Title:** Graphing Linear Equations

**Subject:** Pre-Algebra Math 7

**Length of Time:** 8 weeks (38 days)

**Unit Summary:** Unit 6 Part 1 covers how to graph and write linear equations. Students will develop the relationship of the slope and points on a line and write linear equations in Point-Slope form and Slope-Intercept form. Students will also learn how write the equation of a line with different given quantities. They can use these different graphs to solve the equation as well. Unit 6 Part 2 will allow students to interpret functions. They will also construct graphs from two quantities that form a linear relationship and describe the relationship using that graph. Unit 6 Part 3 will allow students to understand how functions operate and relates to a graph. They will compare properties of two functions and represent functions in multiple ways. They will be introduced to slope-intercept form and recognize that the graph will be a straight line. Unit 6 Part 4 will allow students to examine scatter plots and interpret data into a graph. They will be able to

understand different patterns and lines of best fit within graphs. They will use linear models and two variable data to explain real life situations. They also will examine frequencies and bivariate data.

**Learning Targets**

PARCC ■ Major Clusters; ■ Supporting Clusters; ● Additional Clusters

<b>Standard #s:</b>	<b>Standards:</b>
8.EE.5	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways.
8.EE.6	Use similar triangles to explain why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at $b$
8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear.
8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.
8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association
8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.

8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.
8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?
8.F.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.
8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line.
8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.
8.F.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.
8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.
8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally

<b>Standards for Math Practice</b>	
<b>Standard#:</b>	<b>Standard:</b>
MP1	Making sense of problems and persevere in solving them.
MP2	Reason abstractly and quantitatively.
MP3	Construct viable arguments and critique the reasoning of others.
MP4	Model with mathematics.
MP5	Use appropriate tools strategically.
MP6	Attend to precision.
MP7	Look for and make use of structure.
MP8	Look for and express regularity in repeated reasoning.
<b>Modifications</b>	
Standards-based grading, reassessments, differentiate assignments, scaffold instruction, study guides, peer/teacher tutoring assistance, tiered assignments, student choice, modify pace, lesson tutorial videos, performance assessments, modified rubrics, assessment modified for IDEA, add enrichment activities, add extension activities to projects, challenge activities

8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.	
<b>Unit 6 Part 1 Essential Questions:</b>		<b>Unit 6 Part 1 Enduring Understanding:</b>
<ul style="list-style-type: none"> <li>· What is meant by the slope of a line, and how can knowing a line's slope help to graph a line and find parallel and perpendicular lines?</li> <li>· How can real world situations be modeled by proportional relationships?</li> <li>· How can solutions be found within an equation?</li> </ul>		<ul style="list-style-type: none"> <li>· Various methods can be used to solve equations and the solution to an equation can be checked by substituting into the original equation.</li> <li>· Linear relationships can be graphed to help solve real world problems and make predictions.</li> </ul>
<b>Unit 6 Part 1 Objectives:</b>		
<ul style="list-style-type: none"> <li>· Students will be able to identify point on a line given its equation.</li> <li>· Students will be able to graph a line given different forms of the equation.</li> <li>· Students will be able to describe how slope relates to horizontal and vertical lines.</li> </ul>		

- Students will be able to relate similar triangles to slope.
- Students will be able to identify a linear function from a table.
- Students will be able to use proportional relationships to solve real world problems.
- Students will be able to solve linear equations for desired variables and values.

### Domain: Functions

#### Cluster: Define, evaluate, and compare functions.

##### Standard #s:

##### Standards:

8.F.2

Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.

#### Cluster: Use functions to model relationships between quantities.

8.F.4

Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two  $(x, y)$  values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.

8.F.5

Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally

#### Unit 6 Part 2 Essential Question:

- What is a function?
- Are properties of functions and graphs the same for all functions?

#### Unit 6 Part 2 Enduring Understanding:

- The definition of a function and what it's graph represents.
- The ability to graph a function and write a function from a graph.

#### Unit 6 Part 2 Objectives:

- Students will construct a function and determine the rate of change and initial value.
- Students will describe a functional relationship by examining a graph.

<b>Pre-Algebra Math 7 Curriculum Unit 6 Part 4</b>	
<b>Title:</b> Data	
<b>Subject:</b> Pre-Algebra Math 7	<b>Length of Time:</b> 2 weeks (10 days)
<b>Unit 6 Part 4:</b> Unit 6 Part 4 will allow students to examine scatter plots and interpret data into a graph. They will be able to understand different patterns and lines of best fit within graphs. They will use linear models and two variable data to explain real life situations. They also will examine frequencies and bivariate data.	
<b>Learning Targets</b>	
PARCC <span style="color: green;">■</span> Major Clusters; <span style="color: blue;">■</span> Supporting Clusters; <span style="color: yellow;">●</span> Additional Clusters	
<b>Domain:</b> Statistics & Probability	
<b>Cluster:</b> Investigate patterns of association in bivariate data.	
<b>Standard #s:</b>	<b>Standards:</b>

8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association		
8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.		
8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.		
8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?
